START HERE

Your simple guide to LabTrack QR

Borrow, return, and track laboratory tools with clear records.

Open the app
labtrack-qr.vercel.app/login
Use the email and password given to you by the tool custodian.

Who does what?

YOUR ROLE	YOUR MAIN TASK
Tool custodian	Record checkouts and returns; manage tools and accounts.
Student	Show My QR; check Borrowed Tools and My History.
Laboratory instructor	Review inventory, student records, and reports.

Find the instructions you need

Sign in, update your profile, and log out 02
Link an authenticator and reset a password 03
Student and instructor instructions 04
Issue tools to a student 05
Record returns, damage, and missing tools 06
Add tools and print QR labels 07
Create and manage accounts 08
View history, reports, and status meanings 09
Quick counter checklist and troubleshooting 10

Before you begin: connect to the internet. Use your own account. For camera scanning, allow camera access when the app asks.

EVERYONE

Sign in and get ready

Everyday sign-in uses your password and Turnstile. An authenticator code is for recovery.

1. **Open the sign-in page**
   Go to labtrack-qr.vercel.app/login. Ask the custodian for an account if you do not have one.

2. **Enter your account details**
   Type your **Email address** and **Password**. Complete the Turnstile security check if it asks you to interact.

3. **Press Sign in**
   Your dashboard opens. You do not need to open your authenticator app for normal sign-in.

4. **Replace a temporary password if prompted**
   Choose a private password with **10 or more characters, including a letter and a number**. Enter it again to confirm, then submit the password-change form.

Update your profile

Open **Profile**. Check your full name, year/section, Course / Program, and contact number. Edit the fields available to you, choose a profile picture if needed, then press **Save profile**.

Photos must be JPEG, PNG, or WebP and no larger than **2 MB**. Some fields are controlled by your account role. Ask the custodian if an account detail needs correction.

Find help or finish your session

Use the menu to open your pages. On a small screen, open the menu button first. For task instructions inside the app, press the **question-mark help button**.

When finished, press **Log Out**, then **Yes, log out**. Choose **Stay signed in** if you opened the confirmation by mistake.

> **If you are sent back to Sign in**
> Your session may have expired. Sign in again, then recheck the current records before continuing a checkout or return.

EVERYONE

Prepare for a forgotten password

Link an authenticator once so you can reset your password yourself later.

Set up your recovery authenticator

1 **Open Profile > Recovery authenticator**

Have Google Authenticator or Microsoft Authenticator ready on your phone. If your authenticator is already linked, keep using it.

2 **Press Set up authenticator**

You may give the device a name, such as My phone. In your authenticator app, add an account and scan the QR displayed by LabTrack.

3 **Confirm the six-digit code**

Enter the current code from your authenticator and press **Confirm authenticator**. On the same phone, you can expand **Manual setup key** and add the time-based key in your authenticator.

4 **Save the recovery code when prompted**

Create and download the recovery code. Keep it privately somewhere safe. Tick **I saved my recovery code** and press **Continue**.

If you forget your password

1 Open Forgot password? — **2 Enter details and a new password** — **3 Complete Turnstile and reset**

On the sign-in page, press **Forgot password?**. Enter your email, the current **Authenticator code**, your **New password**, and **Confirm new password**. Complete Turnstile and press **Reset password**. Sign in again with the new password.

> **No linked authenticator, or no access to your phone?**
> Ask the tool custodian privately for help. If you still know your password, you can sign in normally. A saved recovery code replaces a lost authenticator together with your password; it is not the six-digit code requested by Forgot password.

Keep recovery private. Never share your setup QR, manual key, or recovery code. To change recovery devices, open Profile > Recovery authenticator and verify the existing device first. Add a backup before removing a device.

STUDENTS AND INSTRUCTORS

Use the pages for your role

Your menu only shows the tasks your account is allowed to use.

Students: borrow and check your tools

1. **Show My QR at the tool counter**
   Sign in and open **My QR**. Show the whole QR square to the custodian. Confirm that the name on your profile is yours.

2. **Check the tools before leaving**
   The custodian scans each tool and confirms checkout. Check the tool names and physical asset codes. Report a wrong or damaged tool before leaving.

3. **Review Borrowed Tools**
   Open **Borrowed Tools** to see everything still assigned to you, including items marked missing. Use **My History** to review previous borrowing and returns.

4. **Return tools through the custodian**
   Bring the actual tools back to the counter. The custodian records the return. Refresh Borrowed Tools afterward to check what remains outstanding.

> **Your QR identifies you**
> It does not sign anyone in or complete a checkout by itself. Avoid sharing screenshots of your personal QR unnecessarily.

Instructors: review laboratory records

Use **Check inventory** or the inventory menu to review tool availability and condition. Open a tool record to see its details and usage history.

Use **Student Records** to review students and **History & Reports** to check borrowing and returns. You can filter records and print or export reports. Ask the custodian to make account, checkout, return, or inventory changes.

If a page or action is unavailable

Check that you are using the correct account. A pending or disabled account may need the custodian's attention. Students and instructors do not confirm tool issues or returns.

TOOL CUSTODIAN

Issue tools to a student

Open Dashboard > Borrow tools. Follow the three steps on the screen.

Identify student — Scan tools — Review & confirm

1 **Identify the student**

Scan the student's personal QR. Or enter their Student ID in **USB scanner or typed Student ID** and press **Use code**. Check the displayed name and Student ID.

2 **Scan each physical tool**

Scan each tool QR. Or type the asset code, such as DM-001, in the tool-code field and press **Use code**. Each physical tool must have its own asset code.

3 **Check ISSUE REVIEW**

Match every listed code and tool name to the items you will hand over. Use the remove button beside an item if you scanned it by mistake. Press **Change** if you selected the wrong student.

4 **Press Confirm checkout**

The button shows how many tools are in the list. Wait for **Checkout complete** before treating the transaction as saved and handing over the tools.

> **A scan is not a saved checkout**
> Tools are only added to the review list until you press Confirm checkout. If a request fails or the connection drops, check History & Reports and the student's current custody before trying again.

If scanning is difficult

Camera: press **Start rear camera**, allow access, and keep the complete QR steady in view. For a USB scanner, focus the code field first.

QR image: press **Upload QR image**. Choose a clear JPEG, PNG, or WebP image, up to 5 MB.

Only approved students and available, non-damaged tools can be issued. Duplicate scans are rejected. Confirm a batch before adding more than **100 tools**.

TOOL CUSTODIAN

Record returns correctly

Open Dashboard > Return tools. Scan only the tools you physically receive.

1. **Identify the borrower**
   Scan the student QR or enter the Student ID and press **Use code**. Check the name and the number of outstanding tools.

2. **Scan each received tool**
   Scan or enter each asset code. The app checks that the tool is outstanding for this borrower. Review the list under **RETURN RECONCILIATION**.

3. **Inspect condition and add notes**
   For each tool, choose **Good**, **Fair**, or **Damaged**. Add a **Return note** when needed. Use **Keep unavailable** if the tool should not be issued again; damaged tools must remain unavailable.

4. **Press Confirm return**
   Check the number on the button. Wait for the success message. The app reports whether the return is complete or partial.

> **Unscanned tools stay outstanding**
> Example: a student borrowed 5 tools but returns only 3. Scan those 3 and confirm the return. The other 2 remain assigned to the student. A partial return does not automatically mark them missing.

Mark a tool missing only after checking

Identify the borrower, then expand **Explicitly mark missing**. Select only the confirmed missing items, add a clear **Missing item note**, and press **Mark selected missing**. Missing tools stay in the borrower's outstanding list.

If a missing tool is found: use this same Return tools workflow. Identify the borrower, scan the recovered tool, inspect its condition, and confirm the return.

If you see "Return recorded": the return was accepted even if a later refresh failed. Identify the borrower again to check current custody. Do not repeat the accepted return.

TOOL CUSTODIAN

Manage tools and QR labels

Use Tool Inventory to find equipment, add assets, and check availability.

Find or update a tool

Search by asset code, tool name, or category and press **Search**. Use the status tabs or **Clear filters**. Open **View** or the asset code for its details, QR, and usage history.

To correct details, edit the tool name, category, description, or allowed condition/status fields, then press **Save asset**. Asset codes cannot be changed. Resolve borrowed or missing tools through **Return tools**.

Add new physical tools

1. **Open Add tools**
   In **Tool Inventory**, expand **Add tools**. Enter Tool name and Category. Use Description for useful distinguishing details.
2. **Choose the batch details**
   Enter an **Asset code prefix**, **Quantity** (1 to 100), and **Starting condition** (Good or Fair). Numbering is automatic. Use a short, consistent prefix.
3. **Save the batch**
   Press **Save tools & create labels**. Example: prefix DM with quantity 5 creates five separate asset records, such as DM-001 to DM-005 for a new prefix.
4. **Print and attach the labels**
   Use the new batch's labels or **Print labels**. Print on A4 and check the print preview. There are 50 asset labels per results page: print each results page you need.

> **Match every label to the correct physical tool**
> Keep the full QR square clear and readable. Do not reuse one QR label for several tools. Check the asset code before attaching it.

Inventory export: press **Export inventory** to download the tools matching the current filters across all matching pages.

Mistaken record: only a never-used tool can be permanently deleted with **Delete unused tool**. Check carefully before confirming; deletion cannot be undone.

TOOL CUSTODIAN

Create and manage accounts

Open User Management. Give account details privately to the correct person.

Create a student account

1 **Expand Create a student account**

Enter Full name, Email address, Student ID, Year / Section, and Contact number. Add Course / Program if available. Check the Student ID and email carefully.

2 **Set a one-time temporary password**

Use 10 or more characters with a letter and a number. Press **Create student account** and wait for confirmation.

3 **Give the student their own sign-in details**

Share their email and temporary password privately. They sign in with Turnstile, choose a private password, and can link a recovery authenticator from Profile.

Create a staff account

Expand **Create a staff account**. Enter the person's name and email. Choose **Laboratory Instructor** or **Tool Custodian**, set a temporary password, and press **Create staff account**. Check the role before submitting.

Manage an existing account

ACTION	WHEN AND HOW TO USE IT
Approve / activate	Use for an account that should have active access. Check the person's identity first.
Disable	Use to stop an account's access when appropriate. The app protects the last active custodian.
Reset password	After privately verifying the person, open Reset password, enter a new temporary password, and press **Set**. Give it only to that person.

Keep account details private
Give each person only their own credentials. Do not circulate a list of everyone's passwords.

REPORTS AND RECORDS

Check history and understand status

Custodians and instructors use History & Reports. Students use My History for their own records.

1 **Find the records**

Search for a borrower, Student ID, or transaction. Choose a status and optional **From** and **To** dates, then press **Apply**. Clear a field and apply again to broaden the results.

2 **Open a transaction**

Select a record to view its tools, item statuses, returned conditions, and notes. Use the asset codes to match the record to the physical equipment.

3 **Print or export**

Choose **Print A4 report** or **Export CSV**. Check the filters before exporting. For a PDF copy, choose Save as PDF in the print dialog if your browser provides it.

Transaction status: the whole checkout

STATUS	MEANING
Borrowed	Tools are still out; none in that checkout have been recorded as returned.
Partial	Some tools were returned and others are still outstanding.
Incomplete	At least one tool in the checkout is marked missing.
Returned	All tools in the checkout have been recorded as returned.

Tool status and condition are different

Status describes custody or availability: Available, Borrowed, Missing, or Unavailable. **Condition** describes the physical state: Good, Fair, or Damaged.

> **Returned does not always mean ready to borrow**
> A damaged tool can be recorded as returned while remaining unavailable. Check both the tool's status and its condition before issuing it again.

KEEP THIS PAGE AT THE TOOL COUNTER

Quick checklist and help

Use these short checks during daily work.

CHECKOUT	RETURN
1. Identify student and check the name.	**1.** Identify borrower and check outstanding tools.
2. Scan each physical tool.	**2.** Scan only tools physically received.
3. Check asset codes in ISSUE REVIEW.	**3.** Inspect condition and add notes.
4. Press **Confirm checkout**.	**4.** Press **Confirm return**.
5. Wait for Checkout complete.	**5.** Check the complete/partial return message.

If something does not work

PROBLEM	WHAT TO DO
Turnstile fails or expires	Use **Retry security check** if shown, or refresh and try again. Check your internet connection.
Too many attempts	Wait the stated **15 minutes** before trying again. Repeated retries will not help.
Authenticator code fails	Use the newest LabTrack code. Set your phone's date/time to automatic. Ask the custodian if access is lost.
Camera will not start	Allow camera access in the browser. Use a typed Student ID/asset code, USB scanner, or QR image instead.
Student or tool is rejected	Check the Student ID, asset code, account approval, and tool status. Remove an accidental duplicate scan.
A save/return looks uncertain	Check current custody and History before repeating it. An accepted return must not be submitted again.
Expected records are missing	Check the account role, search filters, dates, and results pages. Ask the custodian if access needs review.

When asking for help: note the page, error message, asset code or Student ID, and the time it happened. Never include passwords, authenticator keys, or recovery codes.
